Messina - Catania track doubling:
Catania Ognina - Catania Central stretch

Description:
The track doubling, flanking existing, of the Catania Ognina - Catania Centrale stretch includes construction of three stops of the metropolitan type (Europa, Picain thelo and Ognina) set within the urban fabric of the city of Catania. The track doubling project contemplates a route speed equal to 85 km/h, traffic movement with automatic train distancing (ABS). The track doubling will be completed in two phases, in the first; the new, single-track bed will be built *(future down line)* east of the current line, with the subsequent adjustment of the latter *(future up line)*.
