

Modified Genoa - Ventimiglia line route between Pegli and Voltri stations

The project consists of a transferral nearer the sea and tripling a stretch of line between Pegli, in Castelluccio, and km 9+689 (bridge on the Branega River) and building the Prà stop at a new site.

The project represents the first functional activation phase for the Genoa Voltri Overall Development Plan and among others enables the elimination of two level crossings and recovery of areas currently cut off by the railway line. The project also includes upgrade work on the Voltri yard.
