

Rome Prenestina - Lunghezza track doubling

The project consists in the track doubling of the track between Rome Prenestina station and km 15+286 located after Lunghezza station and the crossing of the Aniene River. Between Prenestina and Salone, the project integrates with work completed as part of the Rome-Naples line HS/HC urban stretch which plans to lay the railway bed for four flanking rails.

The project also includes the new Ponte di Nona stop, as well as works to facilitate train sidings at the Lunghezza stop.
