

# Bergamo - Treviglio track doubling

The project consists in the track doubling of the line, flanking existing track, eliminating all Level Crossings and replacing them with alternative structures. Also included: adjusting Treviglio Ovest station and Verdello Station to the Overall Development Plan, including building a remote-control PBRRI, as well as building three new stops at Stezzano, Levate and Arcene.

The project further includes introducing a new simplified PBRRI in Bergamo and installing noise barriers in functional phases.
