

Genoa - Ventimiglia line track doubling

## Andora - San Lorenzo a Mare stretch

### Description

Track doubling of the Andora-S.Lorenzo a Mare stretch constitutes an extension of the approximately 24km-long San Lorenzo a Mare - Ospedaletti stretch dual track, activated in 2001.

The route between S.Lorenzo a Mare and Andora runs along a modified route for approximately 18 Km, of which approximately 13Km is in tunnels. New installations are also planned for Imperia (station), Diano (stop) and Andora (station) as is equipping the line with automatic train distancing systems and the SCMT Train Operation Control System. Bringing this project about will contribute to increasing traffic capacity; reducing journey times; modernising performance standards; increasing safety levels (eliminating level crossings, eliminating stretches exposed to coastal erosion and hydrogeological risk, adapting the hydraulic standards of civil engineering works and tunnel safety equipment).
