

# Pisa - Livorno Axis upgrade

## Description

The project contemplates infrastructural works to separate traffic flows on the Tirrenica Main line from those of the Florence – Pisa line, at Pisa Central station. The work plan also contemplates adapting to the Overall Development Plan and installing Pisa's new Central Computerized System (CCS), as well as upgrading and rationalising freight and port facilities serving the Livorno area, including track doubling between Livorno Calambrone and Livorno Porto Nuovo. Work to upgrade and speed up the Pisa - Collesalveti - Vada line is also planned.
