

# Bari – Taranto: Bellavista – Cagioni double crossover track doubling

## Description:

The project is part of the work planned for the Bari-Taranto freight link upgrade between the Adriatic Corridor and the ports of Taranto (“Evergreen” hub port) and Gioia Tauro. The project contemplates building the link between the Bari - Taranto line and the Taranto - Metaponto line thanks to a simple, single-track, double crossover link, about 6 Km long, between the Bari - Taranto and Taranto - Metaponto railway lines, which, leaving Bellavista Station, joins the new Cagioni operating control point, where a junction is planned to the loading and unloading stretch linked to the new Taranto multi function hub port. The final detailed design was approved in 2004; the design and construction contract was awarded in 2005.
