

Foligno - Fabriano track doubling

Description

The project contemplates track doubling of the stretch, between the line leaving Foligno station, all ready to receive the dual track and mileage point Km 223+281 approaching Fabriano station, where similar preparations have been made. The work is mostly along a modified route and in tunnels; the stretch to be dual-tracked for an overall 54km-distance is in the territory of the Marche region over no more than about 6 km, from the border with Umbria, located in Fossato di Vico tunnel, to Fabriano station.
