

Pontremolese main line: increasing current line performance

Description

The project contemplates work to upgrade the line and increase its performance, primarily aiming to raise quality standards for the service and improve performance features. The 1st currently financed phase includes work bringing up to standard and speeding up routes and/or building underpasses in some of the line installations, upgrading electric traction (ET) equipment. The Project also includes the installation of new safety features at Pontremoli, Borgo Val di Taro and Grondola, harmonising the distancing system across the entire line, and a new public information system.
