

Pontremolese line: Berceto-Chiesaccia and Parma-Fornovo track doubling

Description

The “Berceto-Chiesaccia and Parma-Fornovo track doubling” Project, means completion of track-doubling on the Pontremolese line. For the work either wholly or partly on Tuscan territory, the project includes track-doubling for the approximately 13-km Pontremoli - Chiesaccia stretch, as well as upgrading the Tuscan –Emilian Appennine mountain pass stretch with the completion of a modified route, between Pontremoli (Massa) and Berceto (Parma), approximately 21 km long, complete with new 19km single-track mountain pass tunnel, leaving the current infrastructure in operation so it can continue to serve the Borgotaro site.
