

## Bologna – Bari technological upgrade Adriatic main line Command and Control System (CCS)

### Description:

The Project involves installing the traffic command and control system (CCS), able to remotely control all station facilities on the Bologna - Bari line and govern train traffic flows from Bari Lamasinata single control post, over approximately 604km of line. The CCS will be able to interface with its counterpart CCS on the Bologna hub and with the systems of all the lines branching out from the Adriatic main artery (Umbro-marchigiano, Abruzzo and Lucano basins centralised traffic control systems CTCs).
